FEATURE 04 OF 14 | PRIORITY P0

Risk Classification

Priority	P0
Judging criteria served	Completeness (35) | UI/UX (15)
Estimated effort	Small (~1 hr) (rough estimate)
Depends on	Risk Scoring

Purpose

Most people will not read a number; they want a clear verdict. Classification maps the 0-100 score to Low, Medium or High and gives each level its own colour, icon, headline and tone of advice.

What it must do

- Thresholds from your brief: **Low 0-29, Medium 30-59, High 60-100.** Thresholds are config values.
- Each level shows a text label, an icon and a colour - never colour alone (accessibility for colour-blind users).
- Each level has its own headline and one-sentence summary (see below).
- Wording avoids absolute claims: never "This is safe" or "This is definitely a scam".

How it should work

- **Low (0-29):** "No strong warning signs found." Add: "This is not a guarantee of safety - stay careful with unexpected requests."
- **Medium (30-59):** "Some warning signs found. Verify before you act."
- **High (60-100):** "Several warning signs found. Do not respond or click anything."
- Level is derived only from the score so there is one source of truth; the UI never calculates levels by itself.
- Suggested colours that suit a dark luxury theme: Low = muted green, Medium = amber/gold, High = deep red. Check each against its background for at least 4.5:1 text contrast.

UI / UX notes

- Level badge sits next to the score and is the first thing read on mobile.
- Use an icon (shield-check / alert-triangle / shield-alert) plus the word - not just a coloured dot.
- Subtle entrance animation only; respect prefers-reduced-motion.

Edge cases and risks

- Boundary values: 29 is Low, 30 is Medium, 59 is Medium, 60 is High.
- Medium messages are the most useful to explain - they teach the user to look closer. Do not water down the Medium copy.
- A Low result on a message the user believes is a scam: the copy must invite caution rather than reassure.

Acceptance tests

Try this	Expected result
Score 0	Low
Score 29 / 30	Low / Medium
Score 59 / 60	Medium / High
Score 100	High
Change threshold in config to 25/55	Levels move accordingly with no code change

Demo tip for the judges

> Show three pre-loaded examples back-to-back (safe, medium, high) so judges see all three states within 30 seconds.
