FEATURE 06 OF 14 | PRIORITY P0

Explanation Panel

Priority	P0
Judging criteria served	Innovation (20) | UI/UX (15)
Estimated effort	Medium (~2-3 hrs) (rough estimate)
Depends on	Rule-Based Detection, Risk Scoring

Purpose

Answers the question every user asks: "Why did it say that?" Each fired rule becomes a card showing what was found, why it matters in plain language, the exact quote, and how many points it added. Adding the cards must reproduce the score.

What it must do

- One card per fired rule, sorted by points (highest first).
- Each card shows: category icon, plain-language title, one-sentence reason, the matched quote, and **+N points**.
- A total row shows the final score and the sum calculation (e.g. 20 + 15 + 25 + 40 = 100).
- A collapsible 'Checks that found nothing' list shows which rules did not fire - reinforcing that a real analysis ran.
- A fixed note: "This score estimates detected warning signs. It is not a probability that fraud has occurred."

How it should work

- **Example card:** 'Asks for your OTP +40' / Why: "Banks never ask you to share OTPs. Anyone who does can empty your account." / Found: "share the OTP you receive".
- Write explanations at a simple reading level - short sentences, no jargon, one idea per card. Keep copy in the rules config so it can be translated later (feature 13 of the full product).
- If a rule was capped by a group (feature 3) say so: "+0 - already counted under credential requests".
- Order and text are generated from the same result object that drives the score, so they cannot disagree.

UI / UX notes

- Cards stack on mobile; two columns on wide screens.
- Cards collapse to a one-line summary with the points; tap to expand (keeps long results scannable).
- Card colour matches the highlight colour of the same category - visual link between feature 5 and 6.
- 'How is this scored?' expander shows the full rule table and thresholds.

Edge cases and risks

- Zero fired rules: show "No warning signs were found" plus the list of checks performed, not an empty panel.
- Very long quoted evidence: truncate to about 80 characters with an ellipsis; full text remains in highlighted message.
- Rule fires many times: show the first quote and '+2 more'.

Acceptance tests

Try this	Expected result
Example message	4 cards: +40, +25, +20, +15; total shows 100
Sum of card points	Always equals displayed score (unless capped, which is explained)
Benign message	'No warning signs found' + collapsed list of 5 checks
Tap a card	Matching highlight in the message flashes

Demo tip for the judges

> Say: "Every point is traceable." Then add the four card values aloud and land on 100.
