FEATURE 08 OF 14 | PRIORITY P0

Example Scam Message

Priority	P0
Judging criteria served	Completeness (35)
Estimated effort	Small (~30 min) (rough estimate)
Depends on	Message Input, all detection features

Purpose

A built-in fictional KYC scam message that always works. It guarantees the judges see a full, correct run even if they do not have a scam message handy - and it is your most reliable demo path.

What it must do

- A **Try example** button fills the message box with the fictional SBI KYC message from your brief.
- The example must produce exactly the result in your brief: 100 / 100, High, with four warning signs.
- Clearly label it **"Fictional example for demonstration"** so it is not mistaken for a real bank message.
- Offer two additional examples for contrast: a normal bank alert (Low) and a medium-risk message.

How it should work

- **Illustrative text - replace with the exact wording from your brief if it differs:**
- "Dear SBI customer, your KYC has expired. Your account will be BLOCKED today. Update immediately at http://sbi-kyc-update.xyz/login and share the OTP you receive to complete verification."
- Expected hits: URGENCY (immediately, today) +20; ACCOUNT_THREAT (KYC expired, account will be blocked) +15; SUSPICIOUS_LINK (bank name in a non-bank .xyz domain) +25; OTP_REQUEST (share the OTP) +40 = 100.
- Use a made-up domain that is clearly not a real bank address; do not make it a clickable link in the UI (render as plain text).
- **Low example:** "Rs 500 debited from A/c XX1234 on 12-Oct. If not you, call the number on the back of your card. Never share OTP with anyone." Expected 0-15 / Low.
- **Medium example:** "Your delivery is held. Pay Rs 25 customs fee within 24 hours: bit.ly/xx12" Expected urgency + link = 45 / Medium.

UI / UX notes

- Example chips beneath the box: 'Scam example', 'Normal bank alert', 'Delivery fee'.
- A small badge on the filled text: "Example" so the user knows it was not typed by them.

Edge cases and risks

- If the user edits the example, it becomes normal input - remove the 'Example' badge.
- Scoring changes after you tune weights: re-check that the demo example still gives the number you present.

Acceptance tests

Try this	Expected result
Click Try example, Analyze	100 / High; 4 cards; 4 highlighted regions
Click 'Normal bank alert'	Low result (shows false-positive handling)
Click 'Delivery fee'	Medium result
Edit the example	Badge disappears

Demo tip for the judges

> Make this the opening of your demo. It is deterministic - it cannot fail.
