FEATURE 13 OF 14 | PRIORITY P1

Scan History

Priority	P1
Judging criteria served	Completeness (35) | Monetization (30)
Estimated effort	Small-Medium (~2-3 hrs) (rough estimate)
Depends on	Risk Scoring, Explanation Panel

Purpose

Lets users revisit earlier results and see repeat patterns. It also supports the business plan: synced history across devices is a natural Premium feature. For the MVP it can live entirely on the user's device.

What it must do

- Automatically save each analysis: time, score, level, which rules fired.
- History list shows time, level badge, score and a short preview.
- Open an item to see the full result again.
- Delete one item or 'Clear all history'.
- Keep the latest 50 items; delete the oldest when the limit is reached.

How it should work

- **Storage (MVP):** browser localStorage under one key. Wrap every read and write in try/catch because storage can be blocked or full.
- **Privacy by default:** store only score, level, rule ids and the first 60 characters as a preview. Offer an opt-in toggle 'Save full message text' (off by default).
- Record structure: { id, createdAt, score, level, ruleIds[], preview, fullText? }.
- Re-open results by re-running the engine on stored text if saved; otherwise show the stored breakdown only.
- Keep history independent of the analysis function so a storage failure never blocks a scan.
- Later (Premium): account-based sync to a database with encryption and a retention setting.

UI / UX notes

- A 'History' tab/page with a simple list; empty state explains it is stored on this device.
- Swipe or tap to delete on mobile; confirmation before 'Clear all'.
- Optional small summary: 'You checked 12 messages; 4 high risk' - supports the awareness story.

Edge cases and risks

- Storage blocked (private browsing): app works; show 'History unavailable'.
- Storage full: drop oldest entries and continue.
- User on a shared device: privacy note and easy Clear all.

Acceptance tests

Try this	Expected result
Run 3 scans	3 entries, newest first
Run 51 scans	Only latest 50 kept
Delete one	Removed; others unaffected
Block storage in browser	Scans still work
Full text saving off	Only preview stored

Demo tip for the judges

> After the three example runs, open History to show all three with their level badges.
